Frontend engineer with 4 years building web apps in React, TypeScript, and Next.js. As the sole engineer on a 30K-product B2B site, I built a quoting tool that cut processing time by about 80%.

EXPERIENCE

Full Stack Web Engineer (Contract) · MTI Corporation Mar 2022 – Present
Materials science equipment · Richmond, CA

- Sole engineer on a 30K-product B2B site. Migrated it from Network Solutions to Shopify and built the Liquid storefront and Remix + Polaris admin apps from scratch.
- Replaced a manual Excel-and-email quote workflow with a two-sided quote tool: a buyer quote cart in its own Redux Toolkit slice, separate from the shopping cart, and a staff admin with auto-filled emails, live tax, and one-click PDF and draft-order conversion. Cut processing time by about 80%.
- Loaded every product on a quote with one batched GraphQL query in a Remix loader instead of one request per product, so the page renders on the server with its data ready.
- Built fuzzy part-number search (“IMCS 2000” finds “IMCS-2000A-LD”) plus multi-level categories, breadcrumbs, and A-Z sorting to keep 30K+ products navigable.
- Generated PDF quotes in the browser with jsPDF and html2canvas, emailed through AWS SES. Tested cart actions, pricing math, and form validation with Jest and React Testing Library.

Frontend Developer · Independent Projects May 2020 – Feb 2022

- Marketing sites and real-time dashboards in React and Next.js (SSG/ISR) with Google Maps API. Cut LCP 25% with route-based code splitting and lazy loading.

SELECTED PROJECTS

TagWise AI · AI-generated SEO tagging for Shopify · Case study 2025

- Merchants review AI-generated tag drafts in an editable staging view, and nothing is pushed through the Shopify GraphQL API until they confirm.
- Virtualized Remix dashboard holds 60fps at 100+ products with real-time SEO scoring. Optimistic UI and code splitting cut perceived latency 40%.

AI Component Playground · text prompt to React component · Case study · Live demo 2026

- Next.js 14, TypeScript, Vercel AI SDK, live preview via Sandpack. A two-phase state model handles the streaming-to-editing handoff, with recovery for incomplete output and rate limiting.

AI Code Reviewer · open-source code review tool · Live demo 2026

- Monaco editor plus selectable review modes, with structured feedback streamed from the OpenAI API.

SKILLS

Frontend: React 18 · TypeScript · JavaScript (ES6+) · Next.js · Remix · Redux Toolkit / RTK Query · GraphQL · HTML/CSS · Tailwind · Shopify Liquid · Polaris · Figma (design-to-code)

Performance & testing: Core Web Vitals (LCP, CLS) · virtualization · code splitting · lazy loading · optimistic UI · WCAG AA · semantic HTML · keyboard navigation

Backend & tooling: Node.js · REST APIs · Shopify Admin API · Prisma · Drizzle · AWS SES · Cloudflare Pages · Git, CI/CD · Claude Code · Cursor · GitHub Copilot

EDUCATION

M.A. Web Design & New Media · Academy of Art University 2018 – 2020
President's Honor List. Coursework: mobile web development, web technology, UX principles

Software Engineering Program · LaiOffer 2020 – 2021
470+ hours: data structures and algorithms core, plus two full-stack project practicums

B.A. English (Business English) · Sichuan University, Chengdu, China
Languages English · Mandarin (bilingual)
